I want to give a notification when my exception stack trace is being printed out in a debug app. But the default behavior is to print out only in release builds. Is there anyway to force the exception to be always in debug mode? A: You can use the strip\_all\_debug symbols switch to the default compiler when building. If you don't use that switch, the symbols will be stripped in release, but not in the debug configuration. I have never heard any code that can usefully be executed in release mode because it doesn't set up debug symbols. If they do exist, they will be stripped and the program will not crash when debug symbols are stripped. If you want symbols in release mode, you do the reverse. It's a bad idea to use release builds on your development machine. Game "Abyss of Death" Feature: Game "Abyss of Death" Developer: Best Games on Vainture Great game I've had some great luck with a lot of hits in the head. I only wish that I had more time to play this game. The Jaggster and Fraggster are not too much of a problem. The only thing I wish is to have a different game, where you don't need to have specific weapons for specific enemies. I wish to play a game where I have a knife for example, and I can kill the Fraggsters with it. Don't know how much of a problem that is, but just a thought. I love having an unlimited number of weapons like in a first person shooter, and having a wide variety of guns and grenades to choose from. If you want to become invincible, you have to kill all the enemies and then you can destroy everything in your path. I hate that there's no real challenge. I can just kill everything and just walk around and shoot everything that moves. It's good, and it's probably the most realistic game I've played, but it's not challenging. If you happen to be killed by an enemy, you can't do anything about it. You have to respawn. The only way to get better at this game is just getting better at hitting people in the head. I wish that it was a little more challenging. 6/10 Good, but not good Actually, this game is pretty good. I've had a lot of fun on my Dad's computer. I don't know why there are so many negative reviews here. It's not bad at all. I think that it's great to be able to have such a great variety of weaponry at your disposal. Especially, in the last level, when there are so many things to use on the AI. I think that they should have made it so you can't just shoot the AI and they have to do something to avoid you. It's not that complicated really, and you could do it with a code on the website. I also think that they should have included more than one character. It would have been amazing if you could play as Daniel or Vera. And for some reason, the last level was too easy. I never have played before to a match like this. It was really fun. I'm not sure if it was really fun, but I had fun anyway. 5/10 Average This is

This game was inspired by the crop circles found all over the world. It is a puzzle-adventure game about a farmer trapped in corn mazes. This game is all about the mechanics and the mysteries of these crop circles. There are no monsters, no boss battles and no puzzle-to-be-solved. A true game for puzzle-adventure lovers. About the developer: This game was created by a fellow developer of a circle discovery game. The game was made for his own amusement but eventually found other players who are also interested in the game and that is when this project started. - GOODLUCK! MONSTER UNIVERSE Run through the darkest depths of the mysterious and dangerous depths of the sea. The deep, you must find out the answers of dark mysteries in the world that was closed off from us. Black skies, rusty iron, crumbling temples, dark forests, bloodthirsty horses. There is an ancient dream hidden in all these locations. Dive into the depths of the sea and find the answers of dark mysteries in MONSTER UNIVERSE. We love to play this kind of games. Because it gives us some reality still in this simulation. So we had the idea to make our own puzzle games, but different kind of puzzle that we wanted to play. And this is our first puzzle game. And we hope you like it.Q: Why would you recommend wrapping up variables in an IIFE? I was looking at some code when I found (function() { //variables }()); I don't really understand why you would want to do that. Is it just for reusability or is there something else you'd like to do? A: One thing that you may want to consider (if you are not already doing so) is to abstract away any calls you make to an external library. For example, if you were writing a code using knockout and wanted to call it from one function while you were writing another function, you could do something like: var self = this; self.model = ko.mapping.fromJSON(model); And then further down you could do: self.model.getItems(); A: IIFEs are used where code is shared between any number of scopes. The main two use cases are the following: Sharing code that is only needed for the next iteration.
